FIG. 1

Example Instance of DRM File Format

```xml
<?xml version="1.0" encoding="UTF-8"?>
<!--This is a mock-up of an instance of the DRM format-->
<envelope>
      <content>
            <dc_elements>
                  <!--Desscriptive metadata, using the Dublin Core attribute set. See
                  http://purl.org/DC/documents/ rec-dces-19990702.htm-->
                        <title>
                  <creator/
                  <subject/
                  <description/
                  <publisher/
                  <contributor/
                        <date/
                        <type/
                  <format value=" " version=" " specification=" " handler=" "/>
                  <identifier/>
                  <source/>
                  <language/>
                  <relation/>
                  <coverage/>
                  <rights/>
                  </dc_elements>
            <content_location/>
            <content_blob/>
      </content>
      <drm>
            <drm_type value=" " version=" " specification=" " handler=" "/>
            <drm_blob/>
            <drm_location/>
      </drm>
</envelope>
```
